LETTER OF RECOMMENDATION

It is my pleasure to recommend Sai Nikhil Raga, who has been working under my leadership over the past 2 years. Nikhil has demonstrated tremendous effort and growth throughout these 2 years and brought in a great value add to the team. He has a combination of positive attitude and the belief that he can always improve and challenge the status quo. I am confident that he will continue to display the same commitment and diligence in everything he does. I highly recommend Nikhil for admission to your University.

Nikhil joined VMware and our team as an Intern back in January 2021. I had the pleasure and opportunity to interview Nikhil in college and hire him. Since our first interaction, he has always awed me with his synthesised technological ideas and perspectives. He had demonstrated a very well thought through and orchestrated a Grievance portal application driven by ML.

Once he joined VMware he was tasked with a daunting ask of improving the performance of a legacy service. He was so sharp in identifying the bottlenecks and rewriting the code modules and optimize it, that within 6 months we started seeing the performance benefits and this was recognised organization wide.

This project got him accolades and credibility to be absorbed into our engineering team as a full time. As a Full time employee and as permanent team member Nikhil has been part of critical initiatives, improvising and delivering enhanced Platform Engineering Services to VMware R&D community. These contributions has made him one of the Top contenders for the upcoming Performance Evaluation and Promotion cycle.

Sai Nikhil Raga is talented, intuitive, dedicated and focussed in his pursuits. Nikhil consistently seeks out constructive feedback, which is his strength and an impressive quality. Nikhil is truly a stand out individual who will impress everyone he meets. Please feel free to contact me if you have any questions.
